

Premium Finger Jointed, Edge-Glued Primed Moulding and Millwork Products.

- 100% Radiata Pine Substrate (no mixed species)
- Factory applied 3 coat finish including final coat priming
- Single source production to ensure consistent product quality and delivery every time

ONE GOAL, ONE AMBITION – PERFECTION

Our primary objective is to produce and offer the best quality product in the marketplace while leading in market competitiveness. We mandate a single quality requirement – Simply the best in the business. There is no need to consider options. We only use the highest quality components available in our production from sustainably sourced 100% Radiata Pine to the highest quality of exterior graded adhesives and coatings available in the marketplace. There is no room for compromise.

Premium Finger Jointed, Edge-Glued Primed Moulding and Millwork Products.

Single Source

Controlled single source ownership. Manufactured from our partner facility in Vietnam.

Sustainable

100% Radiata pine sourced from socially sustainable and managed forests.

Vertically Integrated

Processes from raw log and Rough Lumber to packaged products.

Highest Quality

All quality control includes log to finished/packaged production.

Adhesives and Coatings

Single source factory-applied coatings, including 2 coats of pressure extruded gesso coating and a finish coat of premium exterior graded acrylic primer. All adhesives in the substrate construction and coating application are "exterior" graded. Although exterior adhesives and coatings are used, exterior applications are not recommended.

Quality Control

3rd party inspections for every load produced. Hourly inspections are mandatory at all production stations. Members of the production management team are always present during all aspects of the production cycle to ensure quality standards.

Freight and Logistics

Freight bookings and shipment tracking. Containers can be quoted to include cross dock service with flatbed truck delivery.
